Purpose

The approval of ITER has started a new era in the field of magnetic confinement (Tokamak) fusion. The conference is the first appointment of the diagnostic community after the approval of ITER, and it will focus on:

- i) the formation of young scientists;
- ii) critical issues related with the measurements of fast particles, plasma facing components, dust and radiation effects;
- iii) review of the status of diagnostics for ITER with particular reference to the capabilities of the present proposed systems to meet the requirements on the measurements;
- iv) some perspective of diagnostic developments for DEMO.

The program will include tutorial lectures, invited oral presentations and posters.
